

SKYLINE IS A COMPREHENSIVE PRINT DIRECTION, WEB-TO-PRINT AND PUBLISHING SOLUTION.

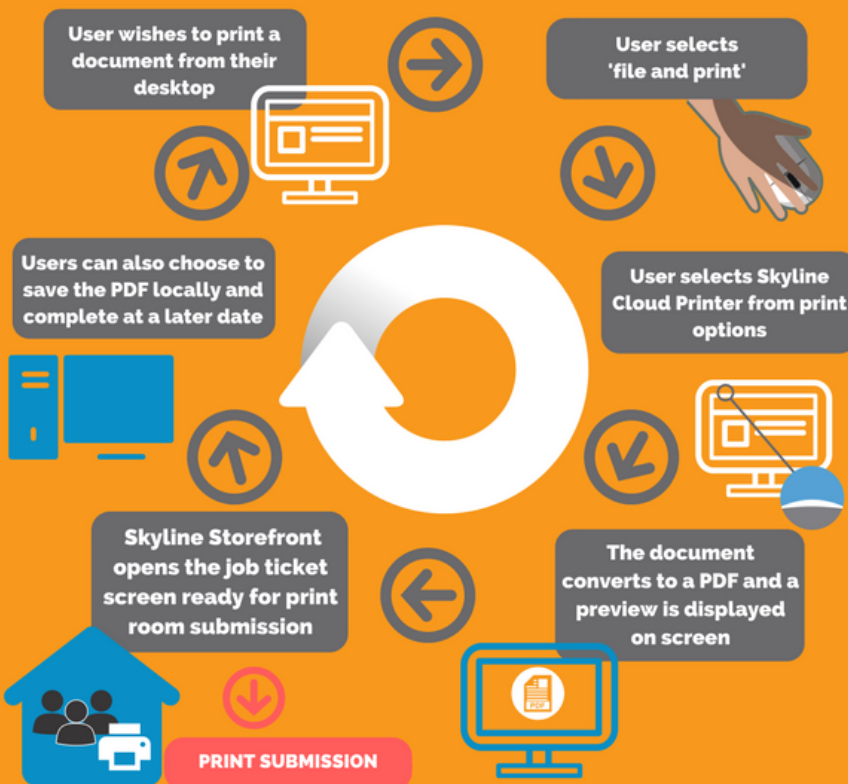

EXTEND YOUR HORIZONS WITH SKYLINE CLOUD PRINTER

Skyline is an online Web-to-Print service that offers an easy, fast and accessible way for users to submit print jobs to the Print Room. However, large volumes of print are generated every day in an office environment which never pass the Print Room but are managed by Multifunction Office Printers.

Skyline Cloud Printer manages day-to-day office print activity. It takes the commonly used 'file and print' method used by offices around the world and applies smart print technology.

Skyline Cloud Printer Process

Although the 'web upload' route offers greater flexibility, 'file and print' is still the natural choice for most office workers.

With Skyline Cloud Printer any application that has File > Print can submit work to your Print Room, so it really is as simple as printing to their office printer.

- Gain control over the entire print production software.
- Fully understand your print and device usage
- Build confidence with users that they are always opting from the best route to print
- Ensure route to printed product is always quick and easy
